

NomaDesk...

Creating Virtual Workplaces for the Digital Nomad

Solo-businesses, SMBs, and consultants share documents reliably, securely and with ease

NomaDesk turns document sharing efforts into a model of secure efficiency—without training, complex software, expensive servers, or specialized IT consultants.

Secure. Synced. Shared.

Perfect for nomadic professionals and boundary-spanning mobile teams of 2 to 25 users, NomaDesk lets you intuitively manage, edit, share and synchronize all your important documents. And unlike other collaborative systems, **NomaDesk Fileservers are always available, on-line or off.** That's because files are stored on a scalable, distributed file system that includes your local hard drive, our central servers, and the computers of the people you are sharing files with.

Easy as Windows®

Since NomaDesk Fileservers appear as Windows®* drives on your computer, anyone can create and manage them without a technical background. Everything is a simple right-click away. Right-click on the NomaDesk Dashboard to access files and invite people to your Fileserver, or, right-click directly on any files within your Fileserver to access the NomaDesk collaboration features. Tools include FileLink, which allows you to send a web-link of a file directly from your desktop, and Notes and States, which enables you to add notes directly to files or set files to certain states for a best-practices document management workflow.

* A Mac version will be available in the first quarter of 2009.

Lock-Box Safe

Your files on NomaDesk are always safely backed up while the local space on your PC is protected behind 256-bit encryption. And with TheftGuard™, all NomaDesk Dashboards are registered with a unique serial number. This means if a NomaDesk enabled PC is reported stolen or lost, the data on that PC self-destructs.

Business Class Features

The **NomaDesk Fileserver** is a secure volume that appears as a Windows® drive on your PC. It stores dynamically synchronized files so you can share them with invited guests.

Email2Folder™ allows files to be sent directly into a Fileserver folder. Files are sent as an email attachment, which is separated from

the email content, and both are automatically stored in a selected folder. You could send files (such as photos) to any Fileserver, even from a mobile phone.

FileLink™ lets you distribute files without using email attachments. By simply sending an email message to your recipients with a link to your file, they are directed to a web page where the file can be downloaded. FileLink™ also lets you audit the history of each file, recording when a file was accessed and by whom.

TheftGuard™ tracks and confirms each NomaDesk Dashboard's unique serial number so you can rest assured all sensitive data will be deleted, if it's ever reported lost or stolen.

File-Publishing lets you set your Fileserver as "read-only" and grant permission to guests to invite other guests. This enables you to publish files and documents to a growing audience of subscribers.

Notes and States enable you to add notes to any file with a simple right-click. You can also add certain states to files, for example "For Review," signaling next steps in your file management flow.

View File History tracks everything that's ever happened to a file. With a simple right-click, see who created a file, wrote a note, or last edited the file. Or, go online to see when a file was deleted.

Teamwork - faster, easier and safer

Share documents with anyone—inside and outside your organization: NomaDesk frees you from geographic limits. No more switching tools to work with people outside your organization. It's as easy to invite a customer or partner to a Fileserver as it is a coworker.

Stay in sync, automatically: NomaDesk automatically sends the changes you make in a Fileserver to your team's computers. And changes are sent to you each time you log onto NomaDesk while connected to the Internet. No more manual and tedious attaching, detaching to/from email, uploading or downloading.

Safeguard your documents: Files are safely locked away on your computer and securely backed up on our central server. If a NomaDesk enabled PC is reported lost or stolen, all files will be deleted.

Access your documents from anywhere, even when offline: NomaDesk stores your data on your local hard drive — there's no need to connect to the corporate network or the internet to access or update information. You stay productive in the office, at a customer site, on the road, or at home.

Work with the most current data: NomaDesk's replication ensures that teams are always working with the most up to date files, and that changes are automatically synchronized through the central server.

Simplify document sharing, economically: With NomaDesk, there's no need for expensive servers, complex software, training or high-priced IT personnel. All Fileservers are seamlessly integrated with Windows® Explorer and appear as a Windows® drive.

Share large files easily without draining bandwidth: NomaDesk's exclusive Delta-sync™ technology synchronizes only the modified portion of files instead of the entire file. Result: hassle-free file sharing while maximizing network bandwidth.

System requirements

- Intel® Pentium® 4, Intel Centrino®, Intel Xeon®, Intel Core™ Duo or any compatible (such as AMD) processors
- Microsoft® Windows® XP with Service Pack 2 or Windows® Vista™
- 512 MB of RAM or higher
- 1.5 GB of available hard-disk space (additional free space required during installation)
- 1,024x768 monitor resolution with 16-bit video card
- Internet connection required for product download, activation and synchronization

NomaDesk creators

Founded in 2004, Aventiv provides best-of-class groupware solutions for nomadic professionals worldwide. The company's flagship product, NomaDesk, delivers a document collaboration solution with emphasis on security, automatic backup, online/offline file access and seamless integration.
